

# CLARIOS EMEA

## WHO WE ARE

The history of Clarios EMEA begins in 1888, when the company AFA/VARTA® started its battery production in Hagen/Germany. Over the course of the last 136 years, we thrived at driving innovation and efficiently meeting customer's needs in global markets. This could be realized due to strategic investments and a strong employee commitment to continuous technological improvement. And today, we still are pushing forward with our solutions for the transformation in the automotive industry by addressing the trends of electrification, digitalization and circular economy.

## PRODUCTS

Clarios EMEA produces advanced, low-voltage battery technologies for mobility. Our batteries and smart solutions power nearly every type of vehicle and are found globally in 1 of 3 cars on the road today. With our chemistry-agnostic approach we produce traditional SLI batteries (Starting, Lighting and Ignition) and advanced AGM and EFP technologies (Absorbent Glass Mat resp. Enhanced Flooded Batteries) as well as Li-Ion batteries for all major OEMs and the independent aftermarket. Clarios is also engaged in the development of particularly environmentally friendly sodium-ion batteries. Our leading brand in EMEA is VARTA Automotive.

## SUSTAINABILITY

Clarios' recycling network enables an environmentally responsible circular supply chain. We work to ensure 100% of our products sold are recyclable. That's why we recycle 8,000 Batteries every hour in our network globally. Additionally, we reached a 90% reduction in energy and greenhouse gas emissions by using recycled materials.
